Vivek Raikawar

Software Engineer · Software Development Engineer

(+91) 6394075862 | vivekckt1997@gmail.com

Summary

Java Developer with 5 years of experience in designing, developing and maintaining **scalable, high-performance application** using Java, Spring Boot, and microservices architecture. Strong expertise in building **RESTful APIs,** solving **real-time business problems**, and optimizing application performance. Experienced in working with **distributed system**, **databases, and messaging platform** to deliver reliable solution.

Passionate **about clean code, problem-solving, and system design**, with a continuous learning mindset to adapt to emerging technology and contribute effectively to organizational growth.

Skills

Back-end Technologies Spring Boot, Spring Data JPA, Spring Security, Hibernate, Kafka, Rest API, MySQL, Spring AI, J2EE

Front-end Technologies React, Angular

Generative AI Spring AI, LLM

Programming Languages Java 8, Java 11, Java 17

Designing & Development System Design, Low-Level Design, Rest API Development, Problem Solving, Payment Gateway integration, Micro services

Development & Deployment Git, Docker, Jenkins, Sonarqube, AWS (EC2, RDS, Lambda, Cloud Watch)

Education

Mahatma Gandhi Chitrakoot Gramodaya Vishwavidyalaya *Satna, India*

B.Tech. in Information Technology *Aug.2013 - June. 2018*

Work Experience

Capgemini: Client - Barclays Bank

Application: Fraud Detection System *Software Engineer*

Java 17 , Spring Boot, Maven, Rest API, Kafka, Spring AI, Spring Security, LLM, React, JavaScript *Feb.2025 - Feb2026*

- Working as a Backend Engineer responsible **for designing and enhancing fraud-monitoring services used for real-time transaction validation**. Involved in **building scalable high-performance service** that integrated with enterprise fraud detection engines and downstream auditing platforms.
- **Implemented fraud-analysis workflow integrating** two major decision engines **FML** and **Falcon,** enabling accurate detection by combining score models and rules based evaluation.
- Designed REST APIs to process incoming transaction requests, validate customer risk parameter, and determine if alerts should be raise.
- Built Kafka-based communication pipeline to **publish suspicious transaction events for real-time** monitoring and further action.
- Ensured idempotent and fault-tolerant transaction processing, preventing duplicate alerts and inconsistent fraud decision.
- Implemented **structured logging, monitoring**, and auditing to ensure traceability of fraud decisions for compliance and investigations.
- Collaborated **with cross-functional teams (risk, compliance, and QA)** to fine-tune **fraud rules and improve detection accuracy.**
- Followed secure coding practices and clean architecture principles ensuring maintainable and production-ready services.

STKT Beauty & Technology Pvt. Ltd *Software Engineer*

Application: Salon Management System *Mar. 2024 - Feb 2025*

Java 17, Spring Boot, MySQL, Payment Gateway Integration, Spring Security, React, AWS

- Designed and developed a **web-based Salon Management Application** to handle online appointment booking, service management, and customer interactions.
- Built **RESTful** API using **Java, Spring Boot** to manage users, salon services, bookings and appointment scheduling.
- Implemented **Spring Security with role-based access** control (**ADMIN, STAFF and USER**) to ensure secure authentication and authorization.
- Integrated **online payment gateway** to support secure and seamless appointment payments through the mobile application.
- Designed and optimized relational database schemas using **AWS RDS** (MSQL) for storing users, appointments, services, and transactions.
- Developed backed logic for real-time slot availability, booking validation, and conflict prevention.
- Deployed the backed application on **AWS EC2**, **configured Cloud Watch** for application monitoring and logging.
- Followed industry best practices including **layered architecture, exception handling, validation, and performance optimization** for production readiness.

Volkswagen

Software Engineer

JAVA 11, SPRING BOOT, MICROSERVICES, MySQL, Spring Security, Angular, React, Gen-AI, AWS

May. 2022 - Jan 2024

- Part of the **global Volkswagen manufacturing technology team**, responsible for building microservices used across **multiple car-assembly plants** to manage accessory and component modification workflows.
- Developed **and maintained 9+ interconnected microservices** supporting end-to-end management of car accessory modification processes across various manufacturing plants.
- Built modules enabling users to raise **customization request (e.g. headlights, doors handles, and mirrors).**
- Designed services for **Part Demand** Management, ensuring stock availability and created the **Last Package** service to verify final assembly checks before vehicle dispatch.
- Built **event-driven communication** between services to handle part updates, demand changes, and assembly status notification.
- Implemented **role-based access** and authorization checks to ensure only authorized users could initiate or approve modification requests.
- **Added logging, monitoring**, and audit trails to support tractability and compliance with manufacturing quality standards.

HCL Technologies

Software Engineer

JAVA 8, Html, CSS

Mar. 2022 - May 2022

- Worked primarily on the **maintenance tasks, including fixing bugs** in the learning path module and handing support-related activities to ensure a smooth user experience. Collaborated with QA and support-teams to identify recurring issues, implemented quick resolutions, and contributed to the stability of the application.
- Handled **support-related activities**, including root-cause analysis and quick turnaround solutions for reported incidents.
- Improved **user experience** and **system reliability** by ensuring defect-free deployment.

Diverse Lynx: Client- TCS

Java Developer

JAVA 8, SPRING BOOT, Hibernate, STS, React

Mar. 2021 - Mar 2022

- Hubble report is an application used for generating different type of reports of the DC store and other application. This project divided into two parts. First part is internal and second is external, internal part use for dc user (store user via extranet private network) external user can access for application in public network (via internet).
- Implemented **Hibernate based** data persistence to efficiently fetch and process large report datasets.
- Collaborated with frontend teams using React to integrate APIs and ensure smooth data visualization.

Quadsel Systems

System Engineer

IT Support

Jul. 2019 - Sep 2019

- Worked as a System Engineer, responsible for software and windows installation across multiple systems. Provided IT support, including troubleshooting hardware and software issues, configuring system settings, and ensuring smooth day-to-day operations for end-users.
- Installed and **configured Windows OS** and essential software on **desktops and laptops**.
- Troubleshot hardware, software, and **network-related issue** to minimize system downtime.
- Assisted users **with system configuration**, **performance issues**, and **application setup.**
- Maintained basic documentation and asset tracking for installed system.
